ACCURATE AND AFFORDABLE IODINE MEASUREMENT

Iodine is sometimes used as a disinfectant for potable, swimming pools and spa waters. It has also found use as a disinfectant in the poultry industry. The rapid determination of Iodine is required for adequate control of this bactericide.

The HANNA HI 718 Checker[®]HC bridges the gap between simple chemical test kits and professional instrumentation. Chemical test kits are not very accurate and only give 5 to 10 points resolution while professional instrumentation can cost hundreds of dollars and can be time consuming to calibrate and maintain. The HANNA HI 718 Checker[®]HC is accurate *and* affordable.

The HI 718 Checker[®]HC portable handheld colorimeter features a resolution of 0.1 ppm (125 points) and $\pm 5\%$ of reading ± 0.1 accuracy. The HI 718 Checker[®]HC uses a modification of the DPD method used for residual chlorine.

The contoured style of this Checker[®]HC fits in your palm and pocket perfectly and the large LCD is easy to read. The auto shut-off feature assures the battery life will not be drained if you forget to turn it off.

The HI 718 Checker[®]HC is extremely simple to use. First, zero the instrument with your water sample. Next, add the reagent. Last, Place the vial into the HI 718 Checker[®]HC, press the button and read the results. It's that easy.
