Extended Parameter Set and Feature Rich

HI 83200 2008 Series is a multiparameter benchtop colorimeter dedicated for laboratory analysis. It can measure up to 45 methods using specific liquid or powder reagents. The amount of reagent is precisely dosed to ensure maximum repeatability.

The 2008 Series of the HI 83200 benchtop photometer from HANNA offers all the features from our previous popular series plus many upgrades and improvements that make these instruments much more versatile and easy to use.

These instruments have been completely redesigned to accommodate more sophisticated optical systems, resulting in greater reproducibility of tests. These new casings feature a cuvette compartment door that eliminates external light disturbances.

The 2008 Series also features a graphic, backlit LCD which greatly enhances user friendliness. The method selection and set up modes are clearly shown on the LCD. Each method's measuring procedure is displayed on the LCD taking the user step by step through the process. At any stage in the measurement process or during setup, the help button will show context sensitive help. All these features are available in a user selectable language. Additionally, the help screen also lists the required reagent sets, accessories and customer support contact information.

The 2008 Series eliminates confusion by automatically converting readings to other chemical forms. Common conversions are available at the touch of a button.

Other features included in the 2008 Series are a USB connection to transfer logged data (the instruments allow up to 200 data points) and the capability to run on rechargeable batteries or a 12 Vdc power adapter (included).
